

## **WE OPTIMISE YOUR SUPPLY CHAIN. WITH CERTAINTY.**

### **We are supply chain experts.**

With over 30 years of experience and our specific methodology, we support companies in realising the full potential of their supply chains, thereby adjusting inventories and delivery readiness in a targeted manner and reducing costs.

Our strength lies in the application of advanced simulation techniques and the use of a "digital twin". This enables us to carry out precise analyses, develop data-driven & customised solutions for your company and implement them quickly and without risk.

## **Correct stocks, correct delivery readiness, lower costs, higher yields**

Our mission is to help our customers achieve sustainable and effective supply chain solutions, which we validate, optimise and implement together.

By combining strategic and operational consulting with advanced digital methods, we achieve significant improvements and our vision is to pioneer innovative supply chain strategies and empower customers to become experts in their own processes.

Our aim is always to organise our customers' supply chains and planning processes so sustainably and efficiently that they achieve a clear competitive advantage. Based on your ERP data, we map the value stream behaviour to be considered and the planning and control processes in a digital twin.

This enables us to identify and quantify fields of action and solutions and to verify their effectiveness and reliability using empirical data. We are characterised by the fact that we stand by our concepts and are happy to implement them together with you in all the necessary details.

## Expertise, experience & innovation

With three decades of experience and state-of-the-art analysis methods, we not only bring you solutions based on proven knowledge, but also innovations that are geared towards the future. We use data-driven analyses and scenario simulations to offer you precise recommendations for action that support your strategic decision-making.
